DoB: 2004-03-20 | Marital Status: Single | Military Service: Educational Exemption

Profile Summary

I'm Borhan Alizadeh, and I've been navigating the programming realm for three years now.

You'll often find me knee-deep in React.js and Next.js, meticulously ensuring that every pixel is in its place and every function runs seamlessly.

As a Front-End Developer, I'm all about crafting user experiences that not only dazzle but also empower. I thrive on optimizing user interaction and refining interfaces to perfection.

My knack for leveraging these technologies effectively enables me to whip up web applications that are not just robust and scalable but also visually captivating.

Now, let's talk tech. I've got a diverse arsenal of front-end technologies under my belt, from the basics like HTML5, CSS3, and JavaScript/TypeScript, to the more intricate tools like ReduxToolkit, React Query, React-Router, and Axios for managing both client-side and server-side states. When it comes to UI design and data visualization, I'm fluent in Tailwind, React Bootstrap, MUI, and AntDesign. And let's not forget about those charting libraries – Recharts and HighChart? Yep, I've got those covered too.

But it doesn't stop there. I've dabbled in a slew of other pertinent technologies beyond the realm of front-end development.

I'm all about diving headfirst into projects that value innovation, user-centric design, and efficient engineering practices. It's where I feel most at home, using my skills and experience to make meaningful contributions.

What sets me apart? It's my holistic perspective. I understand how front-end components fit into the bigger picture of web development, allowing me to tackle problems with clarity and insight.

Education

2020 - 2022

Diploma in Math and Physics

Institute/School: Shahid Gahremani HighSchool

Ardabil, Iran

2023 - Present

Bachelor of Computer Engineering

Institute/University: Islamic Azad University

Tehran, Iran

Work Experience

July 2023 - Present

Front-End Developer

Tipax Courier Service

Tehran, Iran

Tasks and Achievements

- Front-end development of internal and external websites of the company.
- - Construction of a panel for the organization's price engineering, which has sections for calculating the price of logistics transfers.
- - Creating a promotion panel to register various events and register a discount code for each event for the organization's representatives across the country
